

MI - Continuous School Improvement Sessions

Overview

School improvement is a cyclical process that spans the full school year. Michigan's MI-CSI model provides the foundation to address school improvement and promote student achievement through a comprehensive and systematic approach consisting of:

- Gathering data
- Analyzing/studying the data within the context of the School Improvement Framework
- Developing a School Improvement Plan
- Implementing, monitoring and evaluating the plan.

The school improvement series continues with information updates, skill development activities, data analysis training, uninterrupted team work time and at-the-elbow assistance to increase participants' understanding and skills. Participants should register as part of a school improvement team and can register for individual sessions or the entire series.
